SPAIN 2023

È

STALKING FOR WILD

Particularly thanks to the attractive and safe hunting of different lbex subspecies, as well as due to the variety of combination possibilities. Spain enjoys an excellent reputation in the world wide hunting community – with lbex hunting as the absolute highlight!

GENERAL TRAVEL INFORMATION

CURRENCY

Euro

TIME DIFFERENCE

CET/CEST in the Iberian Peninsula, Ceuta, Melilla, and the Balearic Islands. CET/CEST -1 hour on the Canary Islands

ELECTRICITY

220 Volt/50 Hertz Alternating current and Schuko plug are widely used

ENTRY REQUIREMENTS

Please note the entry requirements for the respective country. Information can be obtained at the responsible consulate. In case a visa is needed, please be advised, that the acquisition is your own responsibility.

CLIMATE

There are huge differences between the various regions of Spain: Mild, rainy winters and hot, dry summers on the Mediterranean coast and in Ceuta and Melilla,

while the weather on the Atlantic Coast is more balanced, mild, and rainy throughout the year. Further inland the climate is continental with major differences in temperature between the summer and winter and mainly low humidity. The climate on the Canary Islands is spring-like throughout the year with low fluctuations in temperature.

There is a chance of forest fires in summer, sometimes affecting tourist regions. As a result, you should sometimes expect traffic obstructions with evacuations in isolated cases. If you are visiting atrisk forest regions, you should avoid hiking and make sure you follow instructions from local authorities. Smoking or lighting open fires in at-risk forest regions is strictly prohibited. If a fire breaks out, you must notify the fire service and local authorities immediately.

In winter and spring, there may be local flooding in northern and central Spain but also snow disruption on the roads. When driving in winter, please bear in mind that vehicles registered in Spain, including hire cars, will essentially only have summer tires fitted. So if possible, please avoid driving in the snow.

HEALTH

European standard of health care.

Taking a first-aid kit containing your regular medication plus medication for common travel-related illnesses is recommended.

Vaccination requirements

Please note the vaccination requirements for the respective country. Information can be obtained at the responsible tropical institute. In case a vaccination is needed, please be advised, that the adherence is your own responsibility.

INSURANCE

Taking out travel insurance in case you fall ill or require ambulance services is strongly advised. We also recommend drivers take out motor legal protection.

GENERAL HUNTING INFORMATION

HUNTING PARTNER:

Hunting in Spain is with our partner, Toquero Hunting Services. Excellent game populations, hunting tradition and Spanish passion guarantee well organized and eventful hunts.

ACCOMMODATION:

As for accommodation, normally we use hunting lodges and country hotels situated in or near the hunting areas. The charm and comfort, along with the Spanish cuisine and wines, should please any hunter.

HUNTING SEASON:

The best time for hunting is during the rutting season, from November to mid-December. This is also the time

when the coat condition is best for taxidermy. In April, when the bucks gather again, hunting is also highly interesting.

GAME SPECIES:

The Ibex is Spain's most important game species and of major interest to Spanish and foreign hunters alike. The Latin name for the Iberian Ibex is "Capra Pyrenaica Hispanica", generally known as "Macho Montes". There are four subspecies: Beceite Ibex, Gredos Ibex, Sierra Nevada Ibex, Ronda Ibex

The characteristic, lyreshaped and slightly twisted horns are especially appealing.

Gredos ibex	October to March
Beceite ibex	October to May October to May
Sierra Nevada ibex	October to May
Ronda ibex	October to May
Cantabrian chamois	April to May, September to October
Pyrenean chamois	September to April
Mouflon	September to May
Wild boar	All-season
Red deer	September to February
Fallow deer	September to February
Roe deer	April to July, September to October
Barbary sheep	September to May
Feral goat	All-season

IBEX SPECIES

BECEITE IBEX

The Beceite Ibex inhabits the mountains of Tortossa and Beceite (up to 1,393 m) southwest of Barcelona. The trophy has a wide spread; the horns are lyreshaped and slightly curve backwards from the middle. The tips of the horns of mature males point upwards. Chances for silver and gold medal trophies are high. Males develop antlers with an average length of 70 - 80 cm. The region has upland character and is vegetated by dense forests and understory which is relatively uncom-

• Madrid

Hunting area Gredos

GREDOS IBEX

The Gredos Ibex is the most popular of Spanish ibexes. This subspecies is endemic to the Sierra de Gredos (up to 2,592 m), ca. 200 km west of Madrid. The trophy is also lyreshaped, the antlers have a greater curvature from the middle backwards than those of the Beceite, the tips point upwards. The horns do not grow as long as those of the Beceite, but the base is very strong. Antlers reach a length of 70 to 80cm on average.

The hunting grounds are located on the south side of Sierra de Gredos in breathtaking landscapes. The mountains are covered by bushes, oak trees and wild walnut trees.

Malaga

SIERRA NEVADA IBEX

The Sierra Nevada Ibex lives southeast of Grenada in the Sierra Nevada in Andalusia. The horns of this subspecies resemble those of the Beceite or Gredos Ibex, but are shorter and significantly weaker at the base. The hunting ground is located in the midst of the Sierra Nevada. From the top of each mountain magnificent views across the sea can be enjoyed – sometimes even as far as North Africa!

The game reserve is rocky and only partially covered by dense bushes. Antlers reach a length of 55 to 65cm on average, superior ones can reach 65 to 70cm.

RONDA IBEX

The Ronda Ibex inhabits the Ronda Mountains, west of Malaga (Andalusia). The antlers of this subspecies point backwards, in a typical V-shape and resemble rather those of the Alpine Ibex. Thus, the Ronda Ibex clearly differs from the other Spanish species.

On average, antlers reach a length of 50 to 55cm, superior ones can reach 65 to 70cm or in exceptional cases even 80 cm. The hunting ground is situated in the Sierra Blanca, north of Marbella. The Ronda Mountains are very similar to the Sierra Nevada.

GENERAL PROVISIONS

MEASUREMENT OF ALL 4 IBEX SPECIES IN SCI SCORES:

Juan Toquero is an authorized measurer and takes measurements of the trophy according to the SCI scoring system together with the hunting guest.

SCI-SCORES FOR THE DIFFERENT IBEXES:

- Gredos bronce 70 points, silver 75 4/8, gold 79 5/8
- Beceite bronce 69 points, silver 75 5/8, gold 80 2/ 8
- Sierra Nevada bronze 63 points, silver 69 7/8, gold 74 7/8
- Ronda bronze 56 points, silver 62, gold 66 1/8
- Surcharge for all Ibexes from 72 SCI-points: € 270,– per point.
- Surcharge for Ibexes with gold medal as in listing above: € 500,-

UNSUCCESSFUL HUNT:

A deposit of 50% of the total hunt cost is payable upon booking. In case of an unsuccessful hunt \leq 1,000,– are refunded. If a hunting guest does not shoot the booked species in spite of repeated permission or invitation to shoot, \leq 1,000,– are retained.

Deposits are non-refundable in case of cancellation, unless a substitute hunter is provided for the booked date. In this case the costs are offset for the substitute hunter.

WOUNDED GAME:

Wounded game is considered shot and is charged for.

TRAVEL DAYS:

Travel days in between hunts are counted as full hunting days.

ADDITIONAL:

No liability or responsibility is accepted for any accidents, illnesses or loss of valuables!
